

USC ASTE-523 -- Spring, 2023
The Design of Low-Cost, Responsive Space Missions
A Near-Term, Income-Generating, Lunar Settlement

Homework #3 – Final Report Outline -- Due 2/2/23

Please note:

Homework Questions should be turned in to the TA, Kevin Sampson, via the DEN website.

This homework is about the Final Report for this course.

Assignment: Create either an outline or a 1-2 page summary of your Final Report for the class. The outline or summary must include a report title and at least 3 references that could be used as background or source material. The outline or summary itself must indicate some part of lunar colonization that you are studying and what you are trying to prove or disprove. The topic should be some specific part of the lunar settlement or settlement process, i.e. legal aspects, growth over time, or gravitational biology testing rather than a broad overview such as “lunar settlements would be fun.”

Note that the actual Final Report does NOT need to be on this topic if you find a more compelling or more interesting topic along the way.
